Summary

Computer Science graduate from Miami University (B.S. Computer Science, May 2026; GPA: 3.46) with experience building Python and SQL data pipelines, full-stack products, applied ML workflows, and reliability-focused tooling. Recent ITSM internship work covered 1M+ operational records, Tableau/OAS reporting, Workday data integration, and automation through APIs. Seeking new-grad software engineering, data engineering, full-stack, or ML-adjacent software roles.

Education

Miami University, Oxford, OH | Bachelor of Science in Computer Science - May 2026

GPA: 3.46 (Dean's List: Fall 2023, Spring 2025, Fall 2025) | Dept GPA: 3.68 | Major GPA: 3.42

Relevant Coursework:

- CSE 385 - Database Systems: Relational modeling, normalization, relational algebra, SQL
- CSE 432 - Machine Learning: Data processing, predictive models, term project on large datasets
- CSE 443 - High Performance Computing: Parallel programming on multiprocessors and clusters
- CSE 484 - Algorithms II: NP-completeness, approximation and randomized algorithms

Technical Skills

- **Languages:** Python, Java, C++, JavaScript, TypeScript, SQL
- **Web and Systems:** React, Next.js, Node.js, Express, NestJS, PostgreSQL, Prisma, Docker, SwiftUI, ARKit, Vision, OpenMP
- **Data and ML:** ETL, pandas, Tableau, Snowflake, RAG, OpenAI Responses API, File Search, LangGraph, MCP, SetFit, sentence-transformers
- **Tooling and Quality:** Git, GitHub Actions, Playwright, axe-core, CI/CD, Linux/Unix CLI, Xcode, VS Code

Projects

Agentic AutoML Platform - Senior Capstone (May 2026)

- Engineered React and Express/PostgreSQL workflow surfaces for dataset upload, EDA, preprocessing, training, experiment tracking, and deployment phases.
- Used LangGraph and MCP orchestration with human approval gates, Dockerized execution, and Playwright/eval-runner validation.

JobTracker - Local-First macOS Job Search Tracker (2026)

- Built Gmail OAuth2/iCloud IMAP ingestion, SQLite workflow state, and SwiftUI dashboard architecture for private local tracking.
- Designed rules, embeddings, and SetFit classifier gates; validation records 182 backend tests and 0.9791 macro-F1 on 96 samples.

Visual Assist - iOS LiDAR Accessibility App (2025-2026)

- Built SwiftUI/ARKit LiDAR obstacle detection, Vision OCR, speech guidance, haptics, and VoiceOver-first flows for on-device use.
- Covered model and utility logic with 71 audited XCTest functions while keeping camera and location context local.

Fast MNIST Neural Network - C++ HPC Project (2025-2026)

- Collaborated on C++17 MNIST train/eval CLI with SIMD/OpenMP kernels, cached dataset loading, and benchmark instrumentation.
- Recorded 97%+ MNIST accuracy and 3.5x dot-kernel speedup in committed benchmark evidence.

Experience

ITSM Data Integration Student Associate (Intern) - Miami University (Jun 2025 - May 2026)

- Built Python and SQL ETL workflows for 1M+ OAS/Tableau/Workday records; normalized operational data for KPI reporting.
- Consolidated Tableau metadata and Workday exports into a 10,453-row deduplicated inventory with deterministic IDs and a 35-field schema.
- Delivered Tableau dashboards and private internal automation, including Slack and OpenAI RAG support with cited-source checks.

Student Worker - Market Street at MacCracken (Aug 2023 - Dec 2023)

- Supported checkout and grill operations; maintained accurate service and safety standards.

Leadership and Activities

- **Volunteer Teacher - USM, Indore, India (2017-2018):** Taught basic education to underserved children, promoting literacy and inclusion.
- **Finalist - MUCAT Design Innovation Competition (Feb 2025):** Selected as finalist team; authored LiDAR visual assistance proposal.
- **4th Place - Social Innovation Weekend (Mar 2025):** Built user-centered solutions to loneliness/isolation; placed 4th among interdisciplinary teams.
