01 / 07

This is a record of what I've built. *And how each piece was checked before I called it done.*

I'm a recent computer-science graduate from Miami University. I build the whole path — the interface, the services behind it, the data they run on, and the machine learning when the problem calls for it. The claims on this paper carry receipts.

ap·prov·al

/ ə'pru:vəl / · noun

1. the moment a human signs for a machine's work. 2. the step I leave to a person.

n.b. — every project below opens into its own case file, source, or live build.

¶ 03 / 07 · the path — field records · 12:06

Thousands of service tickets. Zero structure.

*This is where I learned that the work
starts in the mess.*

jun 2025 — may 2026
miami university · oxford, ohio

ITSM Data Integration Student Associate

jun 2025 —

The tickets arrive without shape. A million-plus service records, and no two name their problem alike.

1m+ operational records — high-volume python + sql transforms

the fix —

Python and SQL teach the records shape. The transforms feed OAS and Tableau, and the dashboards they fill are read across university departments.

oas/tableau reporting — dashboards across departments

the bot —

A chatbot in Slack takes the routine questions — wired to Workday, Oracle Analytics, and Tableau, with access governed at every joint.

governed data access — workday · oracle · tableau apis

the assistant —

A second assistant reads policy and answers with its sources cited — and drops the answers whose quotes it cannot verify.

[19/20 cited-source sweep — policybot, the policy assistant](#)

aug 2022 - may 2026

B.S. Computer Science

May 2026 — dean's list, fall 2023 & spring/fall 2025 — 3.65 GPA in major coursework (transcript on request).

03 / 07

¶ 04 / 07 · the capstone — senior design expo — spring 2026 · 15:23

The agent drafts the whole pipeline.

Nothing runs until a human says go.

Agentic AutoML turns a dataset and a goal into a structured, auditable ML workflow. The agents plan it and run it, then stop at the seventh phase and wait for a person.

7 phases · every one gated · langgraph + mcp orchestration

what the run is held to — quoted from the case file

Require human approval before generated actions alter workflow state.

read the case file — agentic automl platform —

- 1.0 ingest
- 2.0 explore
- 3.0 preprocess
- 4.0 engineer
- 5.0 train
- 6.0 evaluate
- the human gate – go / no-go
- 7.0 deploy

fig. 4.0 – the 7-phase gated lifecycle, abridged.

run · model	metrics	status
038 · log-reg		approved

fig. 4.1 – experiment registry, transcribed private-safe excerpt.
 – not published: the repository is private, and the demo-data metric trail has not shipped. see the case file.

Applied

Your inbox already knows where you applied.

Applied reads it – inbox in, a pipeline of real applications out.

macro-f1 0.98 – 96-sample gate

the case file —

last verified 2026-07

fig. 5.0 – the sorting line – the 96-message eval set through rules → e5 similarity → gated setfit.
 96 messages · 12 per label × 8 labels · macro-f1 0.9791 – committed eval baseline · ships in-browser: int8 onnx, 22.8 mb

Glyph

No frameworks. Just math, memory, and C++.

Then OpenMP and SIMD together made it 3.5× faster.

[openmp+simd dot kernel – 3.5x vs -O3 baseline, committed benchmarks](#)

[the case file](#)

last verified 2026-07

fig. 5.1 – the race – equal time, measured distance · the forward pass – a drawn 7, answered.
 3.5x – openmp+simd dot kernel vs -O3 baseline (dot 256), committed benchmarks · avx-512 · avx2 · neon · wasm-simd128

jetpack-compress (<https://jetpack-compress.vercel.app>)

One gzip stream. Every core writing it.

jetpack-compress splits the bytes across virtual threads – and stitches one byte-valid member.

[72 tests, 0 failures – jdk 25 @ af2c4b1 \(https://github.com/yadava5/jetpack-compress/blob/af2c4b1/README.md\)](#)

[the live demo ↗ \(https://jetpack-compress.vercel.app\)](#)

[source \(https://github.com/yadava5/jetpack-compress\)](#)

[system card ↗ \(https://jetpack-compress.vercel.app/system-card\)](#)

last verified 2026-07

[gzip this figure in your browser ↗](#)

fig. 5.2 – split → parallel → stitch – virtual-thread gzip
 into one byte-valid member.
 ~6.5x vs single-threaded java.util.zip (±50%, quick benchmark)
 · 72 tests, 0 failures · jdk 25 @ af2c4b1

Cadence

A calendar and task app you drive in plain English.

Type a sentence and it files the event or task – and now schedules Google Meet meetings with multi-attendee invites.

[1,145 automated tests – 634 frontend + 511 backend, vitest](#)

[the case file ↗](#)

last verified 2026-07

typed – an illustrative sentence
 “lunch with sam and priya next tuesday at noon – add a meet”

fig. 5.3 – the parse – a plain-english sentence resolves into chips on the week grid + a google meet link.
 chrono-node + compromise · google meet – multi-attendee invites · 1,145 tests passing – taskflow-calendar @ 69a59e7

cited above, argued in full –

[master inventory pipeline](#) [policybot](#)

also live, without a case file –

[lifequest ↗ \(https://getlifequest.vercel.app/\)](https://getlifequest.vercel.app/) – a social-good concept for job-seekers; a playable prototype · [system card ↗ \(https://getlifequest.vercel.app/system-card\)](https://getlifequest.vercel.app/system-card)

¶ 06 / 07 · how i work — after dark · 21:07

Make it learn.

271 backend tests — jobtracker validation ledger

Make it fast.

openmp+simd dot kernel — 3.5x over -O3, committed benchmarks

Make it honest.

19/20 cited-source sweep — policybot validation ledger

fig. 6.0 — the litany, with receipts.

gate	disposition
classifier gate — jobtracker	✓ passed
cited-source sweep — policybot	— refused
benchmark suite — fast-mnist	— refused

fig. 6.1 — the gates, kept.
 refused — the gate stopped the run ·
 passed — human signed off

¶ 07 / 07 · the approval gate — closing page · 22:41

Every pipeline I build ends with a
 human decision.

This one ends with yours.

...Ayush showed strong judgment, independence, and follow through. He understood intent, not just requirements. He took feedback, iterated quickly, and delivered usable outcomes. He is disciplined, thoughtful, and reliable. Ayush would add value to any data, analytics, or platform team that expects real contribution and accountability.
